Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

 Claims 6, 10-15 and 29, drawn to a method for evanescent field assisted imprinting, classified in class 430, subclass 311.

- II. Claims 7-9 and 16-20, drawn to a mask and a method of making a mask, classified in class 430, subclass 5.
- III. Claims 31-33, drawn to a data recording medium, classified in class 430, subclass 270.11.
- IV. Claims 21-24, 27-28 and 30, drawn to a method of pressing a template on a solid material, classified in class 264.
- V. Claims 25-26, drawn to pouring molten material on a template, classified in class 264, subclass 247.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, IV, V and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process could be used to make a different product such as one that is patterned but not used for recording.

Inventions II and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process could be used with a materially different mask.

Inventions I, II, IV and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or

Art Unit: 1756

different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the pouring of molten metal has nothing to do with the use of light for exposure to make an article or curing an object.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the search required for Group I is not required for Group II, and their recognized divergent subject matter restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Conclusion

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Stephen Rosasco whose telephone number is (571) 272-1389. The Examiner can normally be reached Monday-Friday, from 8:00 AM to 4:30 PM. The Examiner's supervisor, Mark Huff, can be reached on (571) 272-1385. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pairdirect.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
